DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/18/02 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over DATO (U. S. Patent No. 3,425,419) or GINSBURG (U. S. Patent No. 5,486,208) in view of DOBAK (U. S. Patent No. 6,254,626) and FOX (U. S. Patent No. 6,090,132). Dato and Ginsburg each disclose a method of advancing a heat exchanger into a central venous vein of a patient for hypothermia treatment (2:40-52 and 4:20-23 respectively). Although Dato and Ginsburg disclose the advantages of inducing hypothermia neither specifically address using the method in a stroke patient for treatment nor monitoring and maintaining blood pressure during the procedure. Fox discloses that hypothermia is the most effective known therapy for stroke (1:20-33). It would have been obvious to one of ordinary skill in the art at the time of the invention to use the step of identifying stroke patients as taught by Fox with the method of inducing hypothermia as

disclosed by Dato or Ginsburg in order to accomplish a well known effective treatment for stroke patients. Dobak teaches that blood pressure is maintained during hypothermia treatment (col. 2, lines 29-40). It would have been obvious to one of ordinary skill in the art at the time of the invention monitor and maintain blood pressure as taught by Dobak in the method of Dato or Ginsburg and Fox to effectively and safely perform the surgical procedure.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. WARD (U. S. Patent No. 5,716,386) and HAYASHI (U. S. Patent No. 6,210,697) show blood pressure control during hypothermia treatment.
